Banområdesgräns

This is a detailed map of the Västra Banregionen (Western Railway Region) in Sweden. It shows a complex network of railway lines connecting various stations and halts. Key features include:

- Stations and Halts:** Represented by circles (stations) and triangles (halts). Many are labeled with names like Göteborg, Lerum, Alingsås, and Kungälv.
- Bandel Numbers:** Large numbers (e.g., BDL 601, BDL 602, BDL 603) are placed along the lines to identify specific sections.
- Line Types:** Different line styles represent single-track, double-track, and electrified lines.
- Geographical Features:** Rivers like the Göta Älv and the city of Göteborg are shown.
- Infrastructure:** Symbols for bridges, tunnels, and level crossings are used.

Göteborg

This inset map provides a detailed view of the railway network within the city of Göteborg. It shows the central station (Göteborg C) and its connections to various parts of the city, including the airport (Göteborg L) and the harbor area. The map highlights the dense network of lines and stations in the urban area.
